Product Description

Polymer Chemistry: Synthesis and Characterization is basically related with the systematic experimental techniques for the synthesis and characterization of polymers in laboratory. The book is more beneficial for the students and teachers of polymer chemistry in various Indian universities. The book presents a clear and systematic approach towards fundamental principles involved min polymer synthesis, applications and their characterization in a simple language. An important feature of the book is that the mathematical calculations involved in characterization have been explained in detail. The authors are of the opinion that the use of this book will build confidence in readers by understanding the fundamentals.
